Enterprise Communications · Best Value Leader

TAC600-40 Enterprise FXO VoIP Gateway, Enabling seamless migration from legacy to IP telephony. This professional-grade gateway integrates traditional PSTN lines into modern IP-PBX systems, preserving existing line investments and phone numbers while delivering flexible, efficient VoIP connectivity.

Core values :

Achieve seamless integration without modifying existing external line infrastructure or changing public contact numbers:

Intelligent bridging between traditional PSTN/analog trunks and VoIP/IMS systems.

Centralized, digitized management of external line resources.

Optimized communication costs with enhanced system reliability.

Application Scenarios:

Call Center Access – Reliable PSTN/analog line integration for traditional/cloud call centers with CRM/ticketing support.

PBX Modernization – Retain existing lines/numbers while connecting to IP/cloud systems.

Branch Networking – Centralized management of distributed analog lines with intelligent routing and failover.

Dedicated Network Access – Secure IP connectivity for hotels, factories, and cross-border circuits.

Emergency Backup – PSTN physical backup for critical sectors during IP network outages.
